Shuffle.com Affiliate API Documentation

Query Parameters

Terms of Use

By using the provided API link, affiliates must agree not to share this link with anyone else.

API Overview

Affiliates are provided with an API link that performs a GET request to retrieve data in JSON format.

Below are the parameters that can be queried:

- **startTime**: The start time for the data retrieval. This should be in Unix time format (seconds). For conversion, you can use Epoch Converter.
- **endTime**: The end time for the data retrieval. This should also be in Unix time format (seconds).

Example:

```
<https://affiliate.shuffle.com/stats/48d25cfa-bbd2-4d90-9d23-
xxxxx?startTime=1727345076&endTime=1727773423>
```

- if you do not provide a startTime or endTime it will query lifetime data.

Response

Sample Response

- the data shown here can be configured with your affiliate manager

```
[{"username":"ABCD","campaignCode":"xxx","wagerAmount":200.00},
{"username":"EFGH","campaignCode":"yyy","wagerAmount":500.00},
{"username":"IJKL","campaignCode":"zzz","wagerAmount":12738.00}]
```

Additional Information

- Rate limit 1 request every 30 seconds.
- Usernames are not hidden or masked by default because affiliates can view the full username on the Shuffle.com dashboard.
- Wagered amount only shows finalised bets
